## Rules in Progress - Rules Tracking Log

July 11, 1997

### General Information

The **numbers** used in the log provide several pieces of information. The first two digits are for the year that the project was first entered into the log. The next three digits are the project number. Projects will be numbered in sequential order as they are added to the log throughout the year. The next three digits are the Texas Administrative Code (TAC) chapter number to which the project relates (Some Air packages relate to State Implementation Plan activities rather than to TAC and are denoted by the letters "SIP" rather than a three-digit number). The last two letters in the **number** denote the program or media that is responsible for the project (AD is Administration, AI is Air, WS is Waste, and WT is Water).

The log is sorted by both **number** and by program or media (Administration, Air, Waste, and Water) for those persons who are only interested in projects relating to a specific media. A separate paragraph with more information about each project is attached.

Projects that have changed significantly since the last edition of the log are listed on the changes report immediately following the rules log itself. In addition, a listing of completed projects is included. This listing provides the adoption, publication, and effective dates of the projects and will be updated monthly along with this rules in process log.

All current projects are reviewed by the Office of Policy and Regulatory Development with the aim of eliminating unnecessary rules and streamlining the requirements of necessary rules. Changes to the status of the projects currently in process and on this log will be included in the next log.

The staff would appreciate any comments that you might have as to the format of this report or the nature of the information that it should contain. Please address your comments to Laura Clark, Office of Policy and Regulatory Development, Texas Natural Resource Conservation Commission, P.O. Box 13087, Austin, Texas 78711-3087 or at (512) 239-5112.
